

CASE STUDY COUNTY FINANCIAL LIMITED

Customer Profile

County Financial Limited aim to maximise the lifestyle choices of their clients by putting them in control of their finances. They provide professional help and advice in the preparation of a lifetime financial plan tailored to their clients' particular requirements and circumstances.

The Challenge

Like many businesses, they have come to rely on email and the Internet but recognise the serious threat that viruses and zero-hour attacks represent. Not only is there the possibility of viruses crashing systems and wiping data from hard disks but some viruses are more stealthy, modifying or moving files without the recipient knowing about it. So there are particularly serious implications for the security of legal documents.

"Since SecureDesk started providing email and web protection, we have not had a single virus or malware contamination. Using SecureDesk to protect our internet connections has resulted in peace of mind about our confidential information." says Miriam Green – IT Manager for County Financial Limited.

SecureDesk Solution

SecureDesk-Mail

All inbound emails are processed through the **SecureDesk-Mail** filtering servers before they reach the County network, each month nearly 10,000 Spam emails are blocked by the service this equates to over 75% of the total inbound email. Each month all the emails with Viruses or Zero-Hour Viruses are prevented from reaching the PC's.

SecureDesk-Web

County Financial's Internet connections are all routed through the **SecureDesk-Web** Virus and Malware Scanning service, a proactive, multi-layered system that blocks threats well before they enter the company's network.

The solution is completely serviced and managed by SecureDesk Ltd at the Internet level, so there is no additional hardware installed at the premises of County Financial Limited, making it easy for them to focus on their business, knowing that their Internet Security is being managed in a proven and effective manner.

About SecureDesk

SecureDesk Ltd was established in 2003 to provide Security Solutions to small to medium size businesses.

Through unique affiliations with leading companies like Scansafe and Webroot, SecureDesk are able to provide the same leading edge products used by Global Enterprises, to companies that otherwise would be unlikely to access enterprise levels of protection because of their size.
