

SECUREDESK-Web

Our **SECUREDESK-Web** (Software-as-a-Service) gives you the advantage in the fight against internet spyware, web viruses and phishing, by blocking malware threats and unwanted content before they reach your network. It eliminates the exposure to software vulnerabilities that are awaiting software publisher updates, because it blocks new web based viruses that exploit these vulnerabilities, even before they can reach a company's computers.

What is **SECUREDESK-Web**?

SECUREDESK-Web by re-routing a company's HTTP traffic through the Security Scanning Servers, makes available to the Small / Medium size businesses leading edge technology which is usually the exclusive domain of major organisation. This same scanning technology is used by ICI, BMW, Rothchild and The National Trust.

The Scanning Servers provides look-ahead scanning to detect and block access to known malware on a website. All data received from internet websites is fully analyzed and where appropriate "Sandbox" tested for viruses exploits prior to delivery to a user's computer, thereby protecting against "Drive by Attacks". This prevents computer contamination from viruses even before the Anti-Virus companies know that the new virus exists.

What does the **SECUREDESK-Web** service offer?

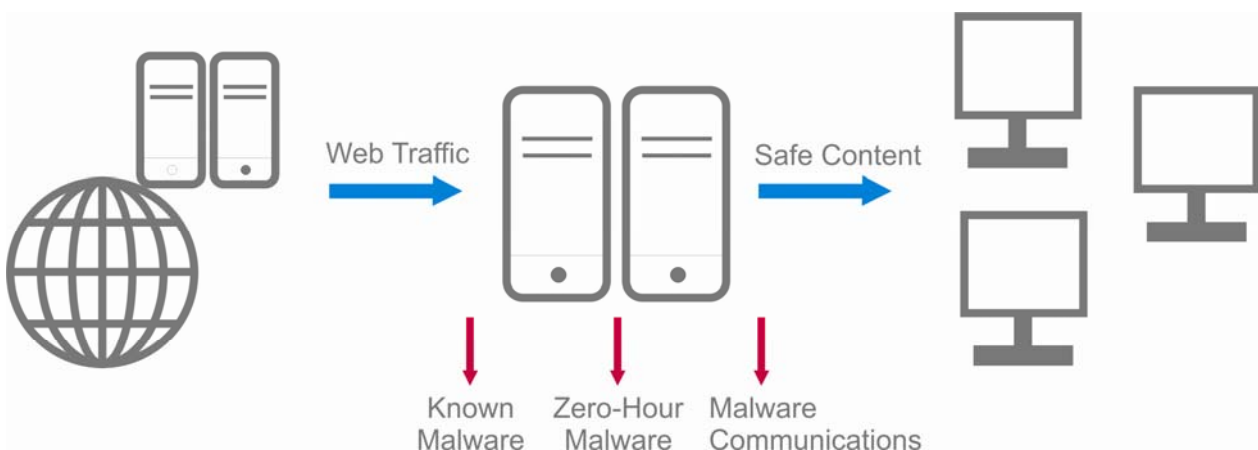

All your computers remain protected against attack via malicious website code.

>Preventing computer compromise

- Unlike traditional Anti-Virus software, **SECUREDESK-Web** prevents Viruses, Spyware, Adware and Zero-Hour Trojans from even reaching your company network from internet websites.

> Improved Business Efficiency

- By implementing **SECUREDESK-Web's** "Content Filtering" option, managers can restrict the type of websites that individual employees can visit during working hours. In this way 'cyber skiving' as it has become known, can be reduced.

Who is SecureDesk?

SecureDesk Ltd was founded in 2003 to supply specialist IT Security solutions, thereby enabling small / medium size businesses to access the same web security technology that is used by many major organisations including BMW, ICI, Rothchild and The National Trust.
